Solar Transfer Valve

Scope of Use / Specification Sheet

The RMC Solar Transfer Valve is used to regulate the flow of water within a solar water heater system with a booster heater.

**Features and Benefits**

- High thermal endurance
- Will endure the extreme temperatures present in solar installations
- Ensures that water will always be heated to a minimum temperature
- Integrated non-return valves
- Prevents cross-flow of water through outlet lines
- Union Connections
- Valve easy to install and easy to remove for servicing of strainers
- Strainers upstream of checks
- Protects valve and check valves from impurities in the water supply
- Tamper-proof special adjuster key eliminates chances of accidental adjustment
- Dezincification resistant
- Meets Australian Standard for potable water supply

**Materials**

- **Body**: Forged Brass
- **Internal Components**: DZR Brass
- **Seals**: Viton®
- **Springs**: Stainless Steel
- **Piston**: Polysulfone
- **Fittings**: DZR Brass
- **Strainers**: Stainless Steel
- **Non-Return Cartridges**: PPO-GF (Noryl®)/EPDM

**Description**

The RMC Solar Transfer Valve is suitable for domestic applications and has been specially engineered to withstand the extreme thermal demands of solar heating applications. When solar heated water is below a set temperature, the valve will redirect flow to a booster heater. Water that has reached the set temperature will be distributed through the system as normal.

Solar Transfer Valve is available in a 20mm configuration.

**Application**

The RMC Solar Transfer Valve should be installed in solar water heater installations where a booster heater is included to ensure that water is heated to a minimum temperature. The Reliance Solar Transfer Valve redirects water which has not been heated adequately to a booster heater, while allowing water which has reached a set minimum temperature to enter the supply line.
Solar Transfer Valve

Technical Specifications

- **Transfer temperature range**: 50°C – 70°C
- **Hot temperature supply range**: 60°C – 99°C
- **Factory set transfer temperature**: 60°C
- **Transition zone (where water flows through both outlets)**: ±3° either side of set transfer temperature
- **Static supply pressure**: 1600kPa maximum
- **Minimum flow rate**: 4 L/min
- **Maximum flow rate**: 43 L/min
- **Fittings supplied**: 20mm (¾”) Male BSP Thread

Installation

Installation is subject to the requirements of the applicable regulatory authority, the National Construction Code Volume Three – Plumbing Code of Australia, associated reference standards as applicable at the time and AS/NZS 3500.1.
